

# Our service for you!

Let us advise you without obligation!

**We recycle your old catalyst!**  
**Please contact us!**

## Emissions consulting

What kind of engine do you have?  
Which catalytic converters are currently installed?  
What did your readings look like last year?

These and other questions are always clarified with you at the beginning of a project. For tricky tasks, we will also drop by personally!

## Maintenance of the motor

Only an engine in good condition, coupled with the best catalyst technology, can safely comply with the limit values. That is why you should have the engine serviced regularly. Also pay attention to the ignition and valves.

## Best catalyst technology

Catalyst design adapted to limit values:  
Selection of the right products for your application.

## Installation of the catalytic converter

Pay attention to the sealing when installing the catalysts and use sufficient sealing material. Ensure the optimum flow on the surface.

## Accredited emission measurement

Only by passing an emission measurement have you proved that your plant complies with the required emission limits. As proof of the compliance with the required limit values after the modification of your plant, we carry out this measurement - in cooperation with the best accredited measuring institutes.

## Measure formaldehyde yourself

You don't want to measure for good luck and risk a remeasurement?  
With our Formaldehyde-Rapid Tester it is possible to measure the formaldehyde value in exhaust gas to an accuracy of 90 %.

Be prepared!

## Aim

The successful performance of an exhaust gas measurement with formaldehyde limits below 20 mg/Nm<sup>3</sup>.
