

EP - CleanRoast®

EMISSION PARTNER

**NO SMOKE.
NO SMELL.**

KEY FEATURES

- ◆ **3 Available Sizes**
Retrofit for shop roasters 5-30 (60) kg/batch
- ◆ **Maintenance Access**
Integrated service hatch for catalyst cleaning
- ◆ **Flexible Connections**
Individually adaptable inlet/outlet fittings
- ◆ **All-Electric Operation**
No gas supply required - fully electric heating

THE CHALLENGE

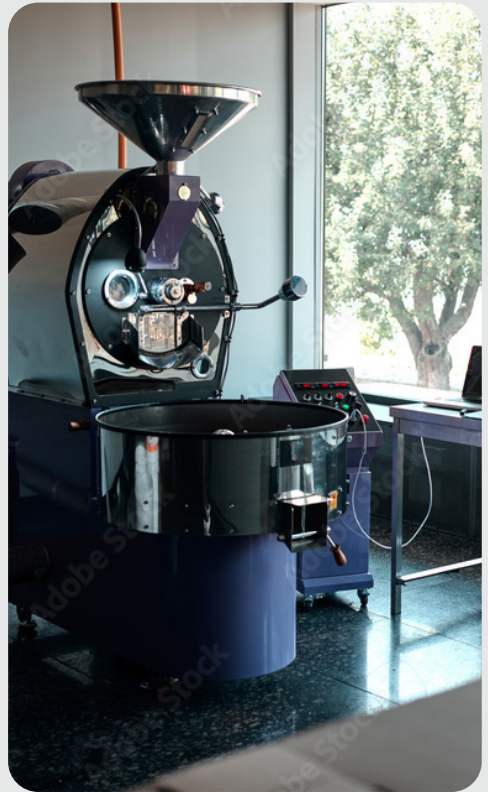

ROASTING CREATES. EXHAUST AIR.

During the roasting of coffee beans, roasting gases are produced and discharged from the roaster. This exhaust gas is often smoky and carries a strong, distinctive odour — causing complaints from neighbours and potential regulatory issues for roastery operators.

THE SOLUTION

CLEAN AIR. SIMPLE RETROFIT.

The EP-CleanRoast is a purpose-built retrofit solution for shop roasters. It adapts to your specific exhaust requirements, with different size options available. A fine-mesh pre-filter and integrated electric heating are included as standard — no additional infrastructure needed.
